PRUEBAS UNITARIAS PARA
ADMINISTRAR MMETODOS DE PAGO

Código de "PaymentMethodFixture" para "PaymentMethodModel"

```php
<?php

class PaymentMethodFixture extends CakeTestFixture {

    public $useDbConfig = 'test';

    public $import = array(
        'connection' => 'default',
        'model' => 'PaymentMethod',
        'records' => true
    );

}

?>
```

Código de "PaymentMethodTest"

```php
<?php
App::uses('PaymentMethod', 'Model');

class PaymentMethodTest extends CakeTestCase {

    public $useDbConfig = 'test';

    public $fixtures = array(
        'app.payment_method',
//        'app.user'
    );

    public $autoFixtures = false;

    public function setUp() {
        parent::setUp();
        $this->PaymentMethod = ClassRegistry::init('PaymentMethod');
    }

    public function testPaymentMethodModel() {
        //$result = $this->loadFixtures('PaymentMethod');
    }

    public function tearDown() {
        unset($this->PaymentMethod);

        parent::tearDown();
    }

}
```

Código de "PaymentMethodsController"

```php
1    <?php
2    App::uses('PaymentMethodsController', 'Controller');
3
4    class PaymentMethodsControllerTest extends ControllerTestCase {
5
6        public $fixtures = array(
7            'app.payment_method',
8            'app.user'
9        );
10       public $autoFixtures = false;
11
12       public function testIsOwnedBy() {
13           //$result = $this->testAction('/payment_methods/');
14           //debug($result);
15       }
16       public function testIndex() {
17           $result = $this->testAction('/payment_methods/index');
18           debug($result);
19       }
20       public function testView() {
21           $result = $this->testAction('/payment_methods/view/1');
22           debug($result);
23       }
24       public function testAddCard() {
25           $result = $this->testAction('/payment_methods/add_card');
26           debug($result);
27       }
28       public function testAddPaypal() {
29           $result = $this->testAction('/payment_methods/add_paypal');
30           debug($result);
31       }
32       public function testDelete() {
33           $result = $this->testAction('/payment_methods/delete/1');
34           debug($result);
35       }
36   }
37   ?>
```

Resultados de las pruebas unitarias

Running PaymentMethodTest

1/1 test methods complete: **1** passes, **0** fails, **0** assertions and **0** exceptions.

Time: 0.017487049102783 seconds

Peak memory: 10,928,896 bytes

Resultado de la prueba para el Modelo PaymentMethod (PaymentMethodTest)

Running PaymentMethodsControllerTest

4/4 test methods complete: **4** passes, **0** fails, **0** assertions and **0** exceptions.

Time: 0.14127993583679 seconds

Peak memory: 10,930,008 bytes

Resultado de la prueba para el Controlador PaymentMethods (PaymentMethodControllerTest)
